

BACK from the BRINK

A FIELD DAY WITH PETER ANDREWS

Join us at Danthonia with Peter Andrews to discover an alternative approach to Sustainable Land Management - Natural Sequence Farming!

Why Natural Sequence Farming?

Peter Andrews, author, grazier and horse stud breeder from Bylong in the Upper Hunter, will outline and demonstrate his concept of Natural Sequence Farming, derived from years of hands-on trial and error. This holistic land management process specifically addresses land degradation and biodiversity losses in riparian systems and their disconnected flood plains and valley slopes. His recent bestseller *Back from the Brink* is available at all ABC bookshops.

Peter's ideas for the future of farming and land use in Australia give an alternative approach to our conventional methods of management. This day will undoubtedly initiate an ongoing dialogue among farmers and land managers as we grapple with climate change and the host of challenges that confront us.

Where: Danthonia Community
When: Saturday 1st of March 2008
Admission: \$20.00 per person
